

### About SKF high school

A small, safe and personalized school where everyone knows everyone.

The school offers an industry technical program that is well adapted to a modern industry demands. Among the elective courses are mathematics, physics and chemistry, providing eligibility and vocational courses of excellence for all our students. Students receive a broad education that leads to employment or further studies in a variety of professional fields.

### Objective

To develop an education concept and do the teaching.

Issues were CAD, Databases and MS Office.

## High school teacher and concept development

### Project

Develop education concept for SKF and do the teaching.

Issues; CAD, Databases, MS Office.

This project involved both students and working adults.

### Vision

The vision was to give each student a platform to understand and learn how to use and manage programs used in the industry.

### The work

The education was scheduled and conducted in the school premises. All students/adults had their own computer and training were conducted with both individual work and group work.
